/Marianne L. Padgett/  
Primary Examiner, Art Unit 1792

1. The following is an examiner's statement of reasons for allowance: applicants amendments of 5/29/2008 (replacing noncompliant amendment of 2/1/2008), plus their arguments made in the response of 2/1/2008, have corrected the 112 problems as set forth in the action mailed 10/4/2007, particularly noting that their comments concerning the beating of "multi-chemistry... formulation" clarify the meaning of this terminology, thus providing file wrapper estoppel for the meaning of the limitation as employed in the claims. Additionally, the amendment of independent claim 10 has added the limitations with clarifications from dependent claim 17, plus additional limitations that were not previously present in the claims, providing a clear sequence of processing steps for the claimed fabrication of a holographic data storage medium that is sufficiently differentiated & unobvious over cited & applied prior art, so as to overcome the rejections as set forth in the action mailed 10/4/2007.

The examiner additionally notes that while references cited in the 2/5/2008 IDS are directed to various injection molding processes, they do not deal with mixing processes associated therewith, however it is noted that JP 61-126648 has a configuration that is substantially similar to Eichlseder (6425968 B1), which was applied in the previous art rejection & JP 63-124247 has a configuration that appears more consistent with the present claim language, injecting adhesive between two substrates to a central hole at one substrate, however like Eichlseder, it is an adhesive that does not appear to require mixing immediately before injection.

Other art of interest retrieved during the update & interference search included: Navarro et al. (7287899 B2) & Jähn et al. (7390121 B2), which are of interest to the state-of-the-art for further teaching on stage at mixing of multi-component fluids for in-line processes, however do not supply missing elements as former is initiating polymerization in the mixer, & the latter appears to solely deal with generic mixing in a pipeline. Additionally, Hananaka (2008/0029914 A1), Wagner et al. (7320541 B2) & Reis et al. (7357564 B2) discuss further mixing & pumping systems for plural components, but are not prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marianne L. Padgett whose telephone number is (571) 272-1425. The examiner can normally be reached on M-F from about 9:00 a.m. to 5:00 p.m.
